ADS1115 ADAPTER

Lets a 10-pin inline ADS1115 board (older Adafruit 1085 and most clones) plug into the breakout board's two-row ADS1115 sockets (rev 2.8: J15 + J10). Straight-through wiring: same signals, same address (0x48, ADDR is grounded on the breakout board), no software change. A+ / A- of the two-row pattern are not used.

J1 and J2 are male pins underneath. J3 is the socket on top. Crossing wires without a dot are not joined.

H1-H4: M2.5, line up with the breakout board's H5-H8: screw the adapter down on 11 mm standoffs.

H5-H6: M2.5, the 10-pin board's own holes (original Adafruit layout): screw it down too.

10-pin inline ADS1115 board -> breakout board two-row ADS1115 socket
